SakhiShield: Test Run Results

Milestone 2 | Team EmpowerHer | Test date: 1 November 2026

Tested in a web browser by opening `index.html`. The prototype uses sample data only, and the data resets when the page is refreshed.

Test	Step	Expected result	Actual result	Result	Screenshot
T1	Open index.html in the browser	Only the Home section shows, with the rose header	Home section shown with the header and menu buttons; other sections hidden	**Pass**	`01-home.png`
T2	Click Trusted Contacts	2 sample Active SOS cards are shown	2 sample cards shown (Riya Verma, Neha Singh), each with an Acknowledge Alert button	**Pass**	`02-contacts-before.png`
T3	Fill the Send SOS form, click Trigger SOS Alert, and click Cancel Alert within 10s	10-second cancel box appears and cancelling stops the alert	Alert cancelled safely; Cancelled False Alerts count increased by 1	**Pass**	`03-sos-cancel.png`
T4	Fill the Send SOS form and click Send SOS Now	New SOS alert is added and a success message appears	Alert added; it appeared in the Trusted Contacts list	**Pass**	`04-sos-added.png`
T5	Open Trusted Contacts again and click Acknowledge Alert on a card	The card disappears from the Active list	Card removed from the Trusted Contacts Active list; the next card remained	**Pass**	`05-after-acknowledge.png`
T6	Open Status & Helplines	Alert shows the Acknowledged status and the Acknowledged count goes up	Alert shown as Acknowledged with a Mark Assisted button; Acknowledged count updated	**Pass**	`06-status-acknowledged.png`
T7	Click Mark Assisted	Status changes to Assisted	Status changed to Assisted; Mark Safe button appeared	**Pass**	`07-status-assisted.png`
T8	Click Mark Safe	Status changes to Safe; Safe (Resolved) count updates	Status changed to Safe & Data Auto-Cleared; totals updated	**Pass**	`08-status-safe.png`
T9	Click Trigger SOS Alert with empty boxes	A message asks the user to fill in the fields	Message shown asking for User Name, Current Location, and Emergency Type	**Pass**	`09-validation.png`

Notes

1. "Alerts Created" starts at 2 because the prototype contains 2 built-in sample SOS alerts. A new alert makes it 3.

2. All data used is sample data. Results are from a student prototype test, not a real pilot, and no real impact figures are claimed.
